plato learning environment: The Friendly Orange Glow Brian Dear, 2018-10-02 At a time when Steve Jobs was only a teenager and Mark Zuckerberg wasn't even born, a group of visionary engineers and designers—some of them only high school students—in the late 1960s and 1970s created a computer system called PLATO, which was light-years ahead in experimenting with how people would learn, engage, communicate, and play through connected computers. Not only did PLATO engineers make significant hardware breakthroughs with plasma displays and touch screens but PLATO programmers also came up with a long list of software innovations: chat rooms, instant messaging, message boards, screen savers, multiplayer games, online newspapers, interactive fiction, and emoticons. Together, the PLATO community pioneered what we now collectively engage in as cyberculture. They were among the first to identify and also realize the potential and scope of the social interconnectivity of computers, well before the creation of the internet. PLATO was the foundational model for every online community that was to follow in its footsteps. The Friendly Orange Glow is the first history to recount in fascinating detail the remarkable accomplishments and inspiring personal stories of the PLATO community. The addictive nature of PLATO both ruined many a college career and launched pathbreaking multimillion-dollar software products. Its development, impact, and eventual disappearance provides an instructive case study of technological innovation and disruption, project management, and missed opportunities. Above all, The Friendly Orange Glow at last reveals new perspectives on the origins of social computing and our internet-infatuated world.

plato learning environment: The Allegory of the Cave Plato, 2021-01-08 The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work Republic (514a-520a) to compare the effect of education (παιδεία) and the lack of it on our nature. It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b-509c) and the analogy of the divided line (509d-511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d-534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

plato learning environment: Plato: A Very Short Introduction Julia Annas, 2003-02-13 This lively and accessible introduction to Plato focuses on the philosophy and argument of his writings, drawing the reader into Plato's way of doing philosophy, and the general themes of his thinking. This is not a book to leave the reader standing in the outer court of introduction and background information, but leads directly into Plato's argument. It looks at Plato as a thinker grappling with philosophical problems in a variety of ways, rather than a philosopher with a fully worked-out system. It includes a brief account of Plato's life and the various interpretations that have been drawn from the sparse remains of information. It stresses the importance of the founding of the Academy and the conception of philosophy as a subject. Julia Annas discusses Plato's style of writing: his use of the dialogue form, his use of what we today call fiction, and his philosophical transformation of myths. She also looks at his discussions of love and philosophy, his attitude to women, and to homosexual love, explores Plato's claim that virtue is sufficient for happiness, and touches on his arguments for the immortality of the soul and his ideas about the nature of the universe. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. plato learning environment: Plato's Camera Paul M. Churchland, 2012-01-20 A noted philosopher draws on the empirical results and conceptual resources of cognitive neuroscience to address questions about the nature of knowledge. In *Plato's Camera*, eminent philosopher Paul Churchland offers a novel account of how the brain constructs a representation—or takes a picture—of the universe's timeless categorical and dynamical structure. This construction process, which begins at birth, yields the enduring background conceptual framework with which we will interpret our sensory experience for the rest of our lives. But, as even Plato knew, to make singular perceptual judgments requires that we possess an antecedent framework of abstract categories to which any perceived particular can be relevantly assimilated. How that background framework is assembled in the first place is the motivating mystery, and the primary target, of Churchland's book. Unexpectedly, this neurobiologically grounded account of human cognition also provides a systematic story of how such low-level epistemological activities are integrated within an enveloping framework of linguistic structures and regulatory mechanisms at the social level. As Churchland illustrates, this integration of cognitive mechanisms at several levels has launched the human race on an epistemological adventure denied to all other terrestrial creatures.

plato learning environment: Education and Evolution Charles R. Reid, 2000 In *Education and Evolution*, Charles R. Reid delves exhaustively into the future problems of K-12 education in the United States. Reid explains how to best achieve effective individual learning, and takes into account both the age-old philosophical issues and the technological possibilities that the future clearly holds for the educational enterprise. Reid cites such contemporary problems as the failure of instructors to achieve a true intellectual interchange with the pupil and the lack of evidence that test scores reflect acquired knowledge. He then weaves together a powerful philosophical argument in favor of various experimental devices that the U.S. educational system may use to alleviate these detriments to true learning. A stimulating read for both the professional educator and the lay person, *Education and Evolution* is an insightful glimpse at 21st Century learning possibilities.

plato learning environment: *Recollection and Experience* Dominic Scott, 1995-08-17 Questions about learning and discovery have fascinated philosophers from Plato onwards. Does the mind bring innate resources of its own to the process of learning or does it rely wholly upon experience? Plato was the first philosopher to give an innatist response to this question and in doing so was to provoke the other major philosophers of ancient Greece to give their own rival explanations of learning. This book examines these theories of learning in relation to each other. It presents an entirely different interpretation of the theory of recollection which also changes the way we understand the development of ancient philosophy after Plato. The final section of the book compares ancient theories of learning with the seventeenth-century debate about innate ideas, and finds that the relation between the two periods is far more interesting and complete than is usually supposed.

plato learning environment: **Understanding "Knowledge", The Essential Approach To Teaching & Learning: Case Studies Of Pre-universities In Singapore** Ching Leen Chiam, 2018-01-03 This pioneering text contributes to the theory and practice of teaching and learning. The purpose is to unlock how key stakeholders of the spectrum of pre-universities in Singapore make sense of 'knowledge' and 'knowledge work', and endeavour to determine how their understanding of 'knowledge' shapes their understanding of 'knowledge work' and the conditions that affect their knowledge work. This monograph contributes in a most productive fashion to the necessary educational debates on teaching and learning, which quickly segue into pragmatic political debates about what sort of society and global community we desire. Using three widely diverse pre-university settings in Singapore as case studies, this book seeks to fill the existing gap by elucidating educators' and students' identification of knowledge, knowledge work and the problems and challenges confronting knowledge work.

plato learning environment: **Democracy and Education** John Dewey, 1916 . *Renewal of Life by Transmission*. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the

blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word control in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

plato learning environment: History of Computing in Education J.A.N. Lee, John Impagliazzo, 2006-04-11 This work derives from a conference discussing the history of computing in education. This conference is the first of hopefully a series of conferences that will take place within the International Federation for Information Processing (IFIP) and hence, we describe it as the First Conference on the History of Computing in Education (HCE1). These proceedings represent a collection of works presented at the HCE1 Conference held in association with the IFIP 2004 World Computer Congress held in Toulouse, France. Contributions to this volume range from a wide

variety of educational perspectives and represent activities from four continents. The HCE1 conference represents a joint effort of the IFIP Working Group 9.7 on the History of Computing and the IFIP Technical Committee 3 on Education. The HCE1 Conference brings to light a broad spectrum of issues and spans four continents. It illustrates topics in computing education as they occurred in the “early days” of computing whose ramifications or overtones remain with us today. Indeed, many of the early challenges remain part of our educational tapestry; most likely, many will evolve into future challenges. Therefore, this work provides additional value to the reader as it will reflect in part the future development of computing in education to stimulate new ideas and models in educational development.

plato learning environment: **Plato and Intellectual Development** Susanna Saracco, 2017-03-28 This book reconstructs the impact of Plato's words for the modern reader. In the Republic, Plato presented his schematization of human intellectual development, and called for collaboration between writer and reader. The response presented in this book results in a new theoretical framework for engaging with Plato's dialogues. Susanna Saracco analyzes the epistemic function of Plato's written words and explores Plato's higher order pedagogy, in which students are not mere learners and teachers are not the depositories of the truth.

plato learning environment: Instructional-Design Theories and Models, Volume IV Charles M. Reigeluth, Brian J. Beatty, Rodney D. Myers, 2016-07-22 Instructional-Design Theories and Models, Volume IV provides a research-based description of the current state of instructional theory for the learner-centered paradigm of education, as well as a clear indication of how different theories and models interrelate. Significant changes have occurred in learning and instructional theory since the publication of Volume III, including advances in brain-based learning, learning sciences, information technologies, internet-based communication, a concern for customizing the student experience to maximize effectiveness, and scaling instructional environments to maximize efficiency. In order to complement the themes of Volume I (commonality and complementarity among theories of instruction), Volume II (diversity of theories) and Volume III (building a common knowledge base), the theme of Volume IV is shifting the paradigm of instruction from teacher-centered to learner-centered and integrating design theories of instruction, assessment, and curriculum. Chapters in Volume IV are collected into three primary sections: a comprehensive view of the learner-centered paradigm of education and training, elaborations on parts of that view for a variety of K-12 and higher education settings, and theories that address ways to move toward the learner-centered paradigm within the teacher-centered paradigm. Instructional-Design Theories and Models, Volume IV is an essential book for anyone interested in exploring more powerful ways of fostering human learning and development and thinking creatively about ways to best meet the needs of learners in all kinds of learning contexts.

plato learning environment: *The Handbook of Technology and Second Language Teaching and Learning* Carol A. Chapelle, Shannon Sauro, 2019-12-05 The Handbook of Technology and Second Language Teaching and Learning presents a comprehensive exploration of the impact of technology on the field of second language learning. The rapidly evolving language-technology interface has propelled dramatic changes in, and increased opportunities for, second language teaching and learning. Its influence has been felt no less keenly in the approaches and methods of assessing learners' language and researching language teaching and learning. Contributions from a team of international scholars make up the Handbook consisting of four parts: language teaching and learning through technology; the technology-pedagogy interface; technology for L2 assessment; and research and development of technology for language learning. It considers how technology assists in all areas of language development, the emergence of pedagogy at the intersection of language and technology, technology in language assessment, and major research issues in research and development of technologies for language learning. It covers all aspects of language including grammar, vocabulary, reading, writing, listening, speaking, pragmatics, and intercultural learning, as well as new pedagogical and assessment approaches, and new ways of conceiving and conducting research and development. The Handbook of Technology and Second Language Teaching and Learning demonstrates the extensive, multifaceted implications of technology for language teachers, learners, materials-developers, and researchers.

plato learning environment: *Innovations in Instructional Technology* J. Michael Spector, Celestia Ohrazda, Andrew Van Schaack, David A. Wiley, 2006-04-21 M. David Merrill has been active in the field of instructional technology for almost 40 years. His contributions range from basic instructional principles and instructional design theory to development and implementation of learning environments. *Innovations in Instructional Technology* is a collection of original essays written by leading scholars and practitioners who have worked with and been inspired by Professor Merrill. The chapters in this book represent a sampling of key innovations in the instructional technology field and include knowledge of how people learn, how people solve problems, how designers conceptualize learning spaces, how teachers implement learning activities, and how evaluators assess outcomes. This volume is divided into five basic areas of research in instructional technology, mirroring the diverse contributions of Dr. Merrill's work: *four chapters on learning objects and the notion of reusable components; *three chapters that discuss fundamental aspects of learning and the design of instruction; *three chapters that address innovations in the area of assessment, evaluation, and model validation; *three chapters that concern theories of learning and instruction; and *three chapters on instructional design practice. The book concludes with a chapter outlining Dr. Merrill's responses to challenges, comments, and questions on the future of the field--ranging from the notion of initial passions with regard to instructional technology to connections between theory and practice to questions of conscience--from an expert panel comprised of many of the contributors to the book. As Dave Merrill's work will continue to be required reading for students of instructional technology, *Innovations in Instructional Technology* is a book that will appeal to students, researchers, and practitioners in the field.

plato learning environment: Removing Obstacles to Economic Growth Michael L. Wachter, Susan M. Wachter, 2016-11-11 The unsatisfactory performance of the United States economy during the 1970s generated considerable debate over potential new directions for economic policy. This volume, the result of the second Wharton/Reliance Symposium held in May 1983, presents and analyzes a range of economic policy options. The focus of the volume is on potential policy remedies for the economic problems of slow real output and productivity growth. Given the range of issues covered and the alternative viewpoints presented, this collection does not search for an overall policy consensus. To focus on consensus would have required narrowing both the subject matter and the distinctive viewpoints that are presented here. The result is an open discussion of a set of existing and innovative policy options. Contributors include Henry A. Kissinger, former Secretary of State; Nobel Laureate Lawrence R. Klein, Lester C. Thurow, Professor of Economics and Management at Massachusetts Institute of Technology, Senator Alan Cranston; Alfred E. Kahn, Chairman of the Council on Wage and Price Stability under President Carter; William W. Winpisinger, International President of the International Association of Machinists and Aerospace Workers; and Justine Farr Rodriguez, Senior Economist with the U.S. Office of Management and Budget, among many others.
