sciencespot net: *Teaching and Learning Online* Franklin S. Allaire, Jennifer E. Killham, 2023-01-01 Science is unique among the disciplines since it is inherently hands-on. However, the hands-on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we, as science teachers, deliver high-quality experiences to secondary students in an online environment that leads to age/grade-level appropriate science content knowledge and literacy, but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning (Killham et al., 2014; Wong et al., 2018), PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments (Molnar et al., 2021; Seaman et al., 2018). This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy (Brigido, Borrachero, Bermejo, & Mellado, 2013; Gunning & Mensah, 2011). *Teaching and Learning Online: Science for Secondary Grade Levels* comprises three distinct sections: Frameworks, Teacher's Journeys, and Lesson Plans. Each section explores the current trends and the unique challenges facing secondary teachers and students when teaching and learning science in online environments. All three sections include alignment with Next Generation Science Standards, tips and advice from the authors, online resources, and discussion questions to foster individual reflection as well as small group/classwide discussion. Teacher's Journeys and Lesson Plan sections use the 5E model (Bybee et al., 2006; Duran & Duran, 2004). Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.

sciencespot net: *Engaging Minds in Science and Math Classrooms* Eric Brunsell, Michelle A. Fleming, 2014-02-25 We decide, every day, whether we are going to turn students on or off to

science and mathematics in our classrooms. Daily decisions about how to incorporate creativity, choice, and autonomy—integral components of engagement—can build students' self-efficacy, keep them motivated, and strengthen their identities as scientists and mathematicians. In this book, Eric Brunsell and Michelle A. Fleming show you how to apply the joyful learning framework introduced in *Engaging Minds in the Classroom* to instruction in science and mathematics. Acknowledging that many students—particularly girls and students of color—do not see themselves as mathematicians and scientists, the authors provide a series of suggested activities that are aligned with standards and high expectations to engage and motivate all learners. Given the current focus on encouraging students to pursue science, technology, engineering, and mathematics (STEM) studies, this book is a welcome addition to every teacher's reference collection. Eric Brunsell is a former high school science teacher and is now associate professor of science education at the University of Wisconsin Oshkosh. Michelle A. Fleming is a former elementary and middle school teacher and is now assistant professor of science and mathematics education at Wright State University in Dayton, Ohio.

sciencespot net: Creating Outdoor Classrooms Lauri Macmillan Johnson, Kim Duffek, 2010-01-01 Schoolyards have come a long way from the barren playgrounds that many people remember. Today's school campuses often feature gardens in which students can learn about native plants and wildlife, grow vegetables and fruit, explore cultural traditions, practice reading and math skills, and use their imaginations to create fun play spaces. And for a growing number of urban students, these schoolyard gardens offer the best, if not the only, opportunity to experience the natural world firsthand and enjoy its many benefits. This book is a practical, hands-on guide for creating a variety of learning environments in the arid Southwest. Filled with clear, easy-to-use information and illustrated with photographs, drawings, and plans, the book covers everything necessary to create schoolyard gardens: An introduction to schoolyards as outdoor classrooms and several types of habitats, including art gardens, cultural history gardens, ecological gardens, literacy gardens, and vegetable gardens Design theory, including a history of garden styles, and design principles and design elements Beginning the design process, including identifying participants and writing a design program that sets out goals and requirements Conducting site research and synthesizing design elements to arrive at a final design Design essentials, including project funding and design features, maintenance, accessibility, safety, and project evaluation and revision Wildlife ecology, including elements needed for survival such as food and shelter Creating gardens for pollinators and other wildlife, including hummingbirds, butterflies, bees, moths, bats, and flies, as well as pest control Lists of native plants for various kinds of habitats and nurseries that sell native plants, as well as books, web sites, and other resources for learning more about native plants and wildlife This guide will be essential for landscape architects, school personnel, parents, and students. Indeed, its principles can be used in designing schoolyard habitats across the country, while its information on gardening with native plants and wildlife will be useful to homeowners across the Southwest.

sciencespot net: Transitioning to Concept-Based Curriculum and Instruction H. Lynn Erickson, Lois A. Lanning, 2013-12-10 A cutting-edge model for 21st century curriculum and instruction How can you spot a thinking child? Look at the eyes: they'll light up, signaling that transformative moment when your student has finally grasped that big idea behind critical academic content. If experiences like this are all too rare in your school, then you need a curriculum and instruction model that's more inquiry-driven and idea-centered. Now. H. Lynn Erickson and Lois Lanning demonstrate how, through concept-based curriculum, you can move beyond superficial coverage and lower-level skills practice to effect intellectually engaging pedagogy, where students engage in problem finding and problem solving. New insights include: How to design and implement

concept-based curriculum and instruction across all subjects and grade levels. Why content and process are two different (but equally important) aspects of any effective concept-based curriculum. How to ensure students develop the all-important skill of synergistic thinking. We're all looking for the best curriculum and instruction model to meet the changing demands of the 21st century. This is it. With the onset of the Common Core and new national content standards, concept-based learning is now more crucial than ever. Erickson and Lanning are 'ahead of the curve' in providing teachers and curriculum leaders with rich instructional strategies to meet these challenging standards. This is an essential book for planning tomorrow's curricula today. Douglas Llewellyn, Educational Consultant and Author of *Inquire Within*, Third Edition *Powerful teaching engages minds with powerful ideas*. At its core, such transformative teaching is neither transmission of information nor practice with inert skills. Rather it is a careful choreography between a mind and an idea such that the mind comes to own the idea in a form that is true to the discipline and expansive for the learner. Erickson and Lanning teach teachers to be choreographers of learning—understanding both what makes content worth knowing and how to engage young minds with that content in ways that extend their capacities to understand it at a deeper level, use it, transfer it, and ultimately create with it. sciencespot net: *Hitting Pause* Gail Taylor Rice, 2023-07-03 Pauses constitute a simple technique for enlivening and enhancing the effectiveness of lectures, or indeed of any form of instruction, whether a presentation or in an experiential setting. This book presents the evidence and rationale for breaking up lectures into shorter segments by using pauses to focus attention, reinforce key points, and review learning. It also provides 65 adaptable pause ideas to use at the opening of class, mid-way through, or as closers. Starting with brain science research on attention span and cognitive load, Rice bases her book on two fundamental principles: shorter segments of instruction are better than longer ones, and learners who actively participate in instruction learn better than those who don't. Pausing helps teachers apply these principles and create student engagement without requiring major changes in their lesson plans. With careful planning, they can integrate pauses into learning sessions with ease and significantly reinforce student learning. They will also gain feedback on students' comprehension. Rice sets out the characteristics of good pauses, gives advice on how to plan them and how to introduce them to maximum effect. She provides compelling examples and concludes with a repertory of pauses readers can easily modify and apply to any discipline. This book contains a compendium of strategies that any teacher can fruitfully use to reinforce learning, as well as a stepping stone to those seeking to transition to more active learning methods. It: • Makes the case for using pauses • Identifies the primary functions of pauses: focusing, refocusing, enhancing retention, or closing off the learning experience • Provides research evidence from cognitive science and educational psychology • Provides practical guidance for creating quick active learning breaks • Distinguishes between starting, middle, and closing pauses • Includes descriptions, with suggested applications, of 65 pauses

sciencespot net: Earthquakes, Volcanoes, and Tsunamis Matthys Levy, Mario Salvadori, 2009-02-01 Earthquakes, volcanoes, and tsunamis don't happen every day, so how can budding scientists study how they work? Through experiments, models, and demonstrations. This in-depth resource will teach readers how to build a seismograph to record a simulated earthquake, compare pressure waves and shear waves—the two types of ground shocks—using a Slinky, and replicate a tsunami's destructive effect on a &“coastline&” built in a bathtub. Authors Matthys Levy and Mario Salvadori even discuss issues of modern architecture and civil engineering: how science can be used to protect buildings and property in earthquake-prone areas. Earthquakes, Volcanoes, and Tsunamis answers a wide array of questions about these phenomena. Can animals &“predict&” earthquakes? How have various cultures explained the movement of the earth throughout history? What is the Richter scale, and what does it tell us about the strength of a quake? And most important, readers will learn how to earthquake-proof their homes, and how to protect themselves should they experience a tremor.

sciencespot net: Educational Research and Professional Learning in Changing Times:

The MARBLE Experience Jane Watson, Kim Beswick, Natalie Brown, 2012-09-18 Educational Research and Professional Learning in Changing Times reports three dimensions of a longitudinal Australian study with the ultimate aim of improving the mathematics learning outcomes for all middle school students in preparation for the quantitative literacy requirements of the 21st century. It was also hoped to improve the prospects for students with the interest to study further mathematics. The project provided professional learning opportunities for teachers, carried out case studies in individual schools, produced well-documented classroom activities in line with the aims, and measured teacher and student change over three years. The three main sections of the book cover the formal data collection and analysis, the qualitative analysis of the case studies, and some of the professional learning activities for teachers. The final section reports the reflections of the authors, especially in relation to the changing educational environment in which the project took place. Many other countries are experiencing similar educational change. The book will supplement other resources for graduate programs for pre-service and in-service mathematics teachers by modeling both a realistic approach to quantitative and qualitative research and a range of practical classroom activities. It will also assist those providing professional learning for teachers in the field unrelated to formal research, as two thirds of the content is based on classroom experiences with mathematics.

sciencespot net: Teaching STEM and Common Core with Mentor Texts Anastasia Suen, Shirley L. Duke, 2013-12-02 Librarians can use this book to become leaders in their schools, collaborating with teachers to keep them abreast of resources that will facilitate the inclusion of STEM in the curriculum. Teaching STEM and Common Core with Mentor Text explains the basics of STEM (Science, Technology, Engineering, and Mathematics) and shows how librarians can become a key component in STEM education, guiding teachers and sparking interest through the books and technology inherent in their curriculum. The volume offers 20 mentor texts, plus in-depth, collaborative lesson plans linked to the Common Core Standards for K-5 librarians. There are additional lessons for classroom teachers, as well as activities that can easily be done in the library or classroom. Each lesson includes mentor text information, an overview of the lesson, step-by-step lesson plans, assessment options, and extension activities. By implementing these lessons in the library, librarians will be able to cover multiple Common Core State Standards and science standards, and at the same time establish the library as a resource for teaching STEM subjects.
