blank southeast region map: Archaeology in America [4 volumes] Linda S. Cordell, Kent Lightfoot, Francis McManamon, George Milner, 2008-12-30 The greatness of America is right under our feet. The American past—the people, battles, industry and homes—can be found not only in libraries and museums, but also in hundreds of archaeological sites that scientists investigate with great care. These sites are not in distant lands, accessible only by research scientists, but nearby—almost every locale possesses a parcel of land worthy of archaeological exploration. Archaeology in America is the first resource that provides students, researchers, and anyone interested in their local history with a survey of the most important archaeological discoveries in North America. Leading scholars, most with an intimate knowledge of the area, have written in-depth essays on over 300 of the most important archaeological sites that explain the importance of the site, the history of the people who left the artifacts, and the nature of the ongoing research. Archaeology in America divides its coverage into 8 regions: the Arctic and Subarctic, the Great Basin and Plateau, the Great Plains and Rocky Mountains, the Midwest, the Northeast, the Southeast, the Southwest, and the West Coast. Each entry provides readers with an accessible overview of the

archaeological site as well as books and articles for further research.

blank southeast region map: Regions and Powers Barry Buzan, Ole Wæver, 2003-12-04 This book develops the idea that since decolonisation, regional patterns of security have become more prominent in international politics. The authors combine an operational theory of regional security with an empirical application across the whole of the international system. Individual chapters cover Africa, the Balkans, CIS Europe, East Asia, EU Europe, the Middle East, North America, South America, and South Asia. The main focus is on the post-Cold War period, but the history of each regional security complex is traced back to its beginnings. By relating the regional dynamics of security to current debates about the global power structure, the authors unfold a distinctive interpretation of post-Cold War international security, avoiding both the extreme oversimplifications of the unipolar view, and the extreme deterritorialisations of many globalist visions of a new world disorder. Their framework brings out the radical diversity of security dynamics in different parts of the world.

blank southeast region map: Early Mapping of Southeast Asia Thomas Suarez, 2012-08-07 With dozens of rare color maps and other documents, *Early Mapping of Southeast Asia* follows the story of map-making, exploration and colonization in Asia from the 16th to the 19th centuries. It documents the idea of Southeast Asia as a geographical and cosmological construct, from the earliest of times up until the dawn of the modern era. Using maps, itineraries, sailing instructions, traveler's tales, religious texts and other contemporary sources, it examines the representation of Southeast Asia, both from the historical perspective of Western exploration and cartography, and also through the eyes of Asian neighbors. Southeast Asia has always occupied a special place in the imaginations of East and West. This book recounts the fascinating story of how Southeast Asia was, quite literally, put on the map, both in cartographic terms and as a literary and imaginative concept.

blank southeast region map: Regional Contexts and Citizenship Education in Asia and Europe Kerry J. Kennedy, Andreas Brunold, 2015-10-05 This book is concerned with the social and political aspects of regional groupings, particularly how citizenship education fares in regional contexts. The European Union (EU) has revolutionised its political and economic aims into more encompassing social and political goals. The Association of Southeast Asian Nations (ASEAN), on the other hand, is still moving towards fuller integration in social and economic terms as South East Asian nations seek a greater role on the global stage and particularly in the global economy. Both the EU and ASEAN have drawn up educational frameworks that collectively work to harness educational achievements which in turn work to fulfill social and economic objectives at the regional level. This book portrays citizenship issues affecting the two regions and describes the way citizenship education can reflect and address these issues. Case studies on EU and ASEAN member countries make up the book's two parts which analyse, among other issues: The Changing Landscape of Citizenship Education in England Political Didactics and Political Education in Germany Rethinking a Conceptual Framework for Citizenship Education in ASEAN Countries Education for ASEANness: A tool to build an ASEAN community This book explores new ideas on citizenship and comparative education in regional contexts and will be of interest to researchers concerned with the impact of regionalism on social development and to citizenship educators studying the influence of contexts on the construction of citizenship education.

What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital

method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

blank southeast region map: The Japanese Buddhist World Map D. Max Moerman, 2021-12-31 From the fourteenth through the nineteenth centuries Japanese monks created hundreds of maps to construct and locate their place in a Buddhist world. This expansively illustrated volume is the first to explore the largely unknown archive of Japanese Buddhist world maps and analyze their production, reproduction, and reception. In examining these fascinating sources of visual and material culture, author D. Max Moerman argues for an alternative history of Japanese Buddhism—one that compels us to recognize the role of the Buddhist geographic imaginary in a culture that encompassed multiple cartographic and cosmological world views. The contents and contexts of Japanese Buddhist world maps reveal the ambivalent and shifting position of Japan in the Buddhist world, its encounter and negotiation with foreign ideas and technologies, and the possibilities for a global history of Buddhism and science. Moerman's visual and intellectual history traces the multiple trajectories of Japanese Buddhist world maps, beginning with the earliest extant Japanese map of the world: a painting by a fourteenth-century Japanese monk charting the cosmology and geography of India and Central Asia based on an account written by a seventh-century Chinese pilgrim-monk. He goes on to discuss the cartographic inclusion and marginal position of Japan, the culture of the copy and the power of replication in Japanese Buddhism, and the transcultural processes of engagement and response to new visions of the world produced by Iberian Christians, Chinese Buddhists, and the Japanese maritime trade. Later chapters explore the transformations in the media and messages of Buddhist cartography in the age of print culture and in intellectual debates during the eighteenth and nineteenth centuries over cosmology and epistemology and the polemics of Buddhist science. The *Japanese Buddhist World Map* offers a

wholly innovative picture of Japanese Buddhism that acknowledges the possibility of multiple and heterogeneous modernities and alternative visions of Japan and the world.

Experience, Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides, (Naples, Italy, 12-19 June 2016). The book aims to emphasize the relationship between landslides and other natural hazards. Hence, three of the main sessions focus on Volcanic-induced landslides, Earthquake-induced landslides and Weather-induced landslides respectively, while the fourth main session deals with Human-induced landslides. Some papers presented in a special session devoted to Subareal and submarine landslide

processes and hazard” and in a “Young Session” complete the books. Landslides and Engineered Slopes. Experience, Theory and Practice underlines the importance of the classic approach of modern science, which moves from experience to theory, as the basic instrument to study landslides. Experience is the key to understand the natural phenomena focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena but mostly, to predict future and, if required, manage similar events. Practical benefits from the results of theory to protect people and man-made works. Landslides and Engineered Slopes. Experience, Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology and geology.

blank southeast region map: World Regional Geography Lydia Mihelic Pulsipher, Alex Pulsipher, Holly M. Hapke, 2005-01-05 The scale of [this book] encompasses vast continents and global forces, but often its descriptive focus on individual lives has the most impact. Stories of people and families make the study of geography compelling. Students begin to grasp the complex patterns at work in the world today as they see how people are affected by, and respond to, economic, social, and political processes. Through these stories of individual lives, [the authors] hope to convey the impact of globalization, a major theme of the text. To highlight global to local and interregional connections, the text includes a number of topics that have no borders: the war on terrorism, realignments in the global political order, interregional trade, the global economy, popular culture, the environment, and the Internet. Here, again, the focus on the individual person provides insight, offering local perspectives on these global trends.-Preface.

blank southeast region map: The Jiankang Empire in Chinese and World History Andrew Chittick, 2020-02-28 This work offers a sweeping re-assessment of the Jiankang Empire (3rd-6th centuries CE), known as the Chinese Southern Dynasties. It shows how, although one of the medieval world's largest empires, Jiankang has been rendered politically invisible by the standard narrative of Chinese nationalist history, and proposes a new framework and terminology for writing about medieval East Asia. The book pays particular attention to the problem of ethnic identification, rejecting the idea of ethnic Chinese, and delineating several other, more useful ethnographic categories, using case studies in agriculture/foodways and vernacular languages. The most important, the Wuren of the lower Yangzi region, were believed to be inherently different from the peoples of the Central Plains, and the rest of the book addresses the extent of their ethnogenesis in the medieval era. It assesses the political culture of the Jiankang Empire, emphasizing military strategy, institutional cultures, and political economy, showing how it differed from Central Plains-based empires, while having significant similarities to Southeast Asian regimes. It then explores how the Jiankang monarchs deployed three distinct repertoires of political legitimation (vernacular, Sinitic universalist, and Buddhist), arguing that the Sinitic repertoire was largely eclipsed in the sixth century, rendering the regime yet more similar to neighboring South Seas states. The conclusion points out how the research re-orientes our understanding of acculturation and ethnic identification in medieval East Asia, generates new insights into the Tang-Song transition period, and offers new avenues of comparison with Southeast Asian and medieval European history.
