Bezanson, 2012-10-31 In this project Randall Bezanson examines judicial interpretations of free speech by means of a broad range of Supreme Court cases, arguing that over the past 15 years the Court has engaged in a truly revolutionary expansion of the reach of the free speech guarantee. The cases include the much-discussed Citizens United decision which granted the full measure of constitutional protection to speech by corporations; the Doe v. Reed case from Washington State that recognized the acts of signing petitions and voting in elections as acts of free speech; the Sumnum decision holding that the decision to select a monument for a public park and to reject another based on the government's disagreement with the monument's message is an act of government speech immunized from challenge by the First Amendment; and the Hurley and Dale cases that recognized free speech claims for messages and meanings that arose out of thin air: speech without an author (a parade);

and an author without a message (the Boy Scouts). As in earlier books on freedom of the press and of religion, Bezanson aims to arm the reader with the capacity to reach her or his own decision about whether the Court's conduct befitted the independent judicial branch and the consequences of its decisions for a representative democracy--Provided by publisher.
